**ORIGINAL TEXT FROM 01.06.2013
EXPLANATORY**

Extraordinary Registration

The articles of incorporation together with the AGDA WORLD MASTER PLAN shall be sent worldwide to countries, states, cities and companies, societies, religions, governmental and non-governmental organisations with the possibility of approval, rejection, or abstention (neutrality) by their representatives.

The addressees (representatives) shall be established by the AGDA members.

Consent: One document that is signed by the representatives is sent back to the AGDA, the other is put in archive.

Rejection: Another document is sent back to the AGDA without a signature.

Abstention (neutrality) : The absence of agreement or disagreement.

We need a WORLD MASTER PLAN, because in this document should be written what way the people, companies, countries should go in the future , ... , and this way comes from our visions, from our knowledge calculated with the rules of the mathematics with the informations of the physics and not fantasies. The most documents what we have read from other organisations are information in of today situation and from this the situation in the future with a automatic way from the situation of today. All other documents are pursuing the interests of fewer companies beyond the target

more than the profit than a solution for new energy and new biochemicals. Together all documents are more a cry for help. Study and understand the causes and effects of the publications in the direction of new energy ,environmental technology and sustainability. Check the details with independent informations/ results what you find and calculate in the formula the real energy- balance, cost- balance, mass- balance and substance balance in the entire system. The entire system including the energy consumption of the logistics, of fertilizers and pesticides, the recycling of waste materials and the energy consumption of the circuit from which the materials are made and the machinery and equipment needed to manufacture them. In addition, the energy consumption of workers and employees too. Today's new energy and environmental technologies is in reality a machine used our climate and our naturel world as fuel. Looking at the whole system where this effect, it is more damaging our world than the fossil energy and chemical solution that we use today. This fact is, however, concealed from ignorance as it comes to a lot of new jobs.

We observe these goings closely and will put an end when the greatest losses are expected for the investors. AGDA GREEN CERTIFICATE.... AND THE GREENWASHING WILL PUT AN END. The other way is to recognize his own faults and to see that we not only have a better solution by far, our new energy and new chemicals are in a whole new dimension. Instead of bothering us with industrial espionage and attempting to steal our knowledge and our experience, we should join together with the resouces what we can organize just in time. All technologies to BCTL_CRUDE (bio-coal-to-liquid crude / bio crude_oil) will go to the company AGICENERGY (A&A CHEMISTRY) belong to the production of bio crude_oil. From bio crude_oil to other products such as

plastics, textile, paint, medicines, fertilizers and / or detergent, all technology will go to the property of the companies and organisations that are funding this. The biopowersystems 3rd generation plant manufacturing will be held in Germany. The biopowersystems 3rd generation are supplied to the cost price, constructed, commissioned, operated, serviced, and also recycled to the circuit. There are no profit made in the plant manufacturing. Profits only through the sale of bioenergy, biofuels, chemicals and materials 3rd generation obtained, which are then distributed fairly and to be arranged under the united companies. The management and control will take on the AGDA, also the business development and if necessary the development of applications for new laws by the policy to speed up the economy and the building of the NEW GREEN INDUSTRY.

We're all in the same boat. The boat is our mother earth and there is no planet B type, and we will not have the opportunity to leave our planet in the future as the aerospace needs chemicals, energy and materials to be originating mainly produced from fossil crude oil. So we must, because we will have no other choice, with joining our forces and resources to transform the entire fossil resource-based economies into sustainable economies, and that all in a very short time. Lone, price pressure, unfair methods of competition, patent fraudulent strategies, as well as corruption and severance payments to unpopular competitor we will not tolerate and fight with all of us asked to submit disposal.

We have crude oil only for the next 30 years, according to our european media and information from the internet. We have not crude oil for the next 70 to 100 years as by specialists calculated by measurements. Here the world's

STATEMENT

largest crude oil deposits are 40% to 50% manipulated up to kept constant the prices in the future and keep down any panic in the stock market what effect on the economic market what effect on the societies and the companies what effect on the employees, working citizens what effect on inner peace and also prosperity, health, freedom and happiness of every citizen and his family with the children.

We have the solution for the coming after peak oil reality and find it good that our time has come to make the world to develop according to our ideas and plans. There will be a social green world. Let the 4th Industrial revolution begin with the green revolution ... hand in hand ... We extend to you the hand and invite you in our new world that already works as an idea and continues to grow at a draft. As members of our organization we will together then decide when the old world order must go to create space for new.

Most people begin to think if it is too late and the remaining ones never understand. The people how talk of peace, they draw as soldiers in the war. The people how speak from climate protection, they make their air conditioners on. The people who honor nature, they build. All the philosophizing of saving the consume they consume the most. The people who love animals they eat the most meat. That the life respect they picking flowers death to smell them. These people will be forgiven because they want to change. They can not act because they are sitting in a machinery which no one can stop, because there is no ideas how to stop, how to transform. Thus, the beginning comes from the end always faster just to these people how only speak and can not act. The crude oil age will be one day no more counted. We

have to leave mineral oil before it leaves us (Faith Birol IEA 08-2010).

Thus, our time has come they will go again, this is life, so in the small in the large. We would not say we are better or worse, or just talk and do not act, maybe even think very differently when we talk or even write them differently because we feel we personal goals follow. Today's world, which was made up of crude oil, natural gas and fossil coal (fossil carbon) is in danger of collapse and fall back into the stone age.

And at the end of next disasters solar panels, wind energy and biogas produced from chemicals and materials that originate have from crude oil. If the crude oil more expensive as well as the new energy and environmental technology is more expensive. They tend to go to along with the crude oil and then completely and forever disappears. Does that mean at the end the downfall of our civilisation and mother nature, as we will again use the wood as a raw material and source of fuel and that for 10 billion people on this planet. For a given price of crude oil, the economy is collapsing, and with your a society which by their increasing poverty and hunger, increasing violence and protests extends also goes to terrormisms. Growing civil unrest and looting means after time then wars, country against country, and finally, as the history has shown, can even develop into world wars, when the situation gets out of control.

We develop and manage our own new energy and new chemical group and that without competitive. Our international organization (AGDA) plan to lead the world into a new age. In a social green age. We write history and create the future. We are working on the solution and ask that you support us with time, materials, money and knowledge in detail. Our international

organization (AGDA) is the judge of billions of people are also of the whole planet. We will judge fairly because we gave our judges the thinking (request we will send them to prove). If our organization fails, then all people will die as human beings and the whole planet (long time view). Our organisation can only fails if more than 50% of the countries, states, cities and companies, societies, religions, governmental and non-governmental organisations do not accept our WORLD MASTER PLAN. You as human being will be responsible that they accept this. Sign up as free membership and help us to create the WORLD MASTER PLAN. After sign up you will get newsletter, teamwork letter, business to-business letter, business-to-people letter and art_visions letter as long as you get a good feeling to come in action. Contact us and tell of your special skills and/or your resources (time, people, investments, materials) you have. Do you wish a cost-free short training you will get it. Then you'll get from us your personal mission. The results of your mission will carry your name if you want it and/or your investments will be fully repaid with a return of investment / ROI 4%-to-18% per year.

■	LIFE EXPECTANCY	[YEARS]

AGRICULTURAL SYSTEM

In this subsystem there is land and fertilizers. Both are required for effective agriculture: the more land and fertilizers are available, the more food can be produced. According to this model, there must eventually be a shortage of food, as well bewirtschaftbares land is finite as the industrial production of fertilizers. This can not keep up with the demand of an ever growing world population step producible amount of food.

NON-RENEWABLE RESOURCES

The subsystem of the non-renewable raw materials is assumed that the total amount of raw materials is finite (approximately 110 times the consumption of 1990 World3/91-Modell). These inventories may be exhausted and then serve as an input variable for the other components of the model. Another important assumption of this model is that the extraction of raw materials is initially relatively easy, but then increasingly difficult.
